HTML AND CSS INTERNSHIP

Personal Portfolio Website Description

This responsive portfolio website showcases personal design work, engineering skills, and contact pathways within an accessible single-page system built completely using semantic HTML5 and vanilla CSS3. It leverages custom grid systems and flex containers to provide smooth structural responsiveness when scaling down from standard ultra-wide desktop monitors to narrow mobile screens. Interactive button states, focus styling elements, and centralized CSS global style tokens were successfully configured to deliver a high-contrast and intuitive viewing experience.

Specification Element	Project Implementation Parameters
Project Topic	Personal Portfolio Website
Core Framework Context	HTML and CSS Internship Submission
Technologies Permitted	Semantic HTML5 / Vanilla CSS3 only (No Javascript/Bootstrap)
Layout Architecture	Hybrid Flexbox alignment and CSS Grid layout configurations
Responsive Target	Mobile-first break fluid resizing structure scaling to desktop sizes
Interactive Features	CSS pseudo-classes for state focus changes on hover behaviors
